for Drugs and Drug Addiction

# Monitoring drug supply in Europe: concepts and techniques

Teodora Groshkova, EMCDDA

2<sup>nd</sup> Annual meeting COPOLAD II

13 November 2017

# I plan to address

1. Challenges to the interpretation of supply indicators
2. A conceptual framework and approach to improvement
3. Diversity of indicators and sources
4. The importance of networks
5. Concluding reflections

# Key challenges for measurement and analysis

# Main uses of drug supply data

- Inform formulation, planning and implementation of strategies to prevent and disrupt drug production and trafficking by tracking trends, help ensure they remain on target
- Foster operational cooperation, inform the policy dialogue and provide a common basis for mutual understanding and discussion
- Support the quantification necessary for measuring impact and thus facilitate the debate on the extent to which measures can be shown to work

# Key challenges for measurement and analysis

- 'Hidden' phenomenon
- Influence of operational priorities
- Robustness and consistency of data collection methods
- Issues of data comparability
- Variability in coverage

# Driving themes for supply indicator development

## A dynamic and systematic approach in line with Council Conclusions (2013)

- Focus on a minimum core data set for routine reporting to form a top-level European analysis
- Data quality needs to improve incrementally over time
- The system should be operationally coherent with, and add value to, national level activities (or it won't work)
- Identify opportunities presented by operational data collection for enhancing our understanding of drug supply patterns and trends

# What did we do?

Conceptual framework for monitoring supply and supply reduction	Literature review	Internal consultation	Critical examination
			
	Late 2015		2-3 March 2017
	Key developments, scope	Draft framework, approach to improvement	Expanded framework, concept paper

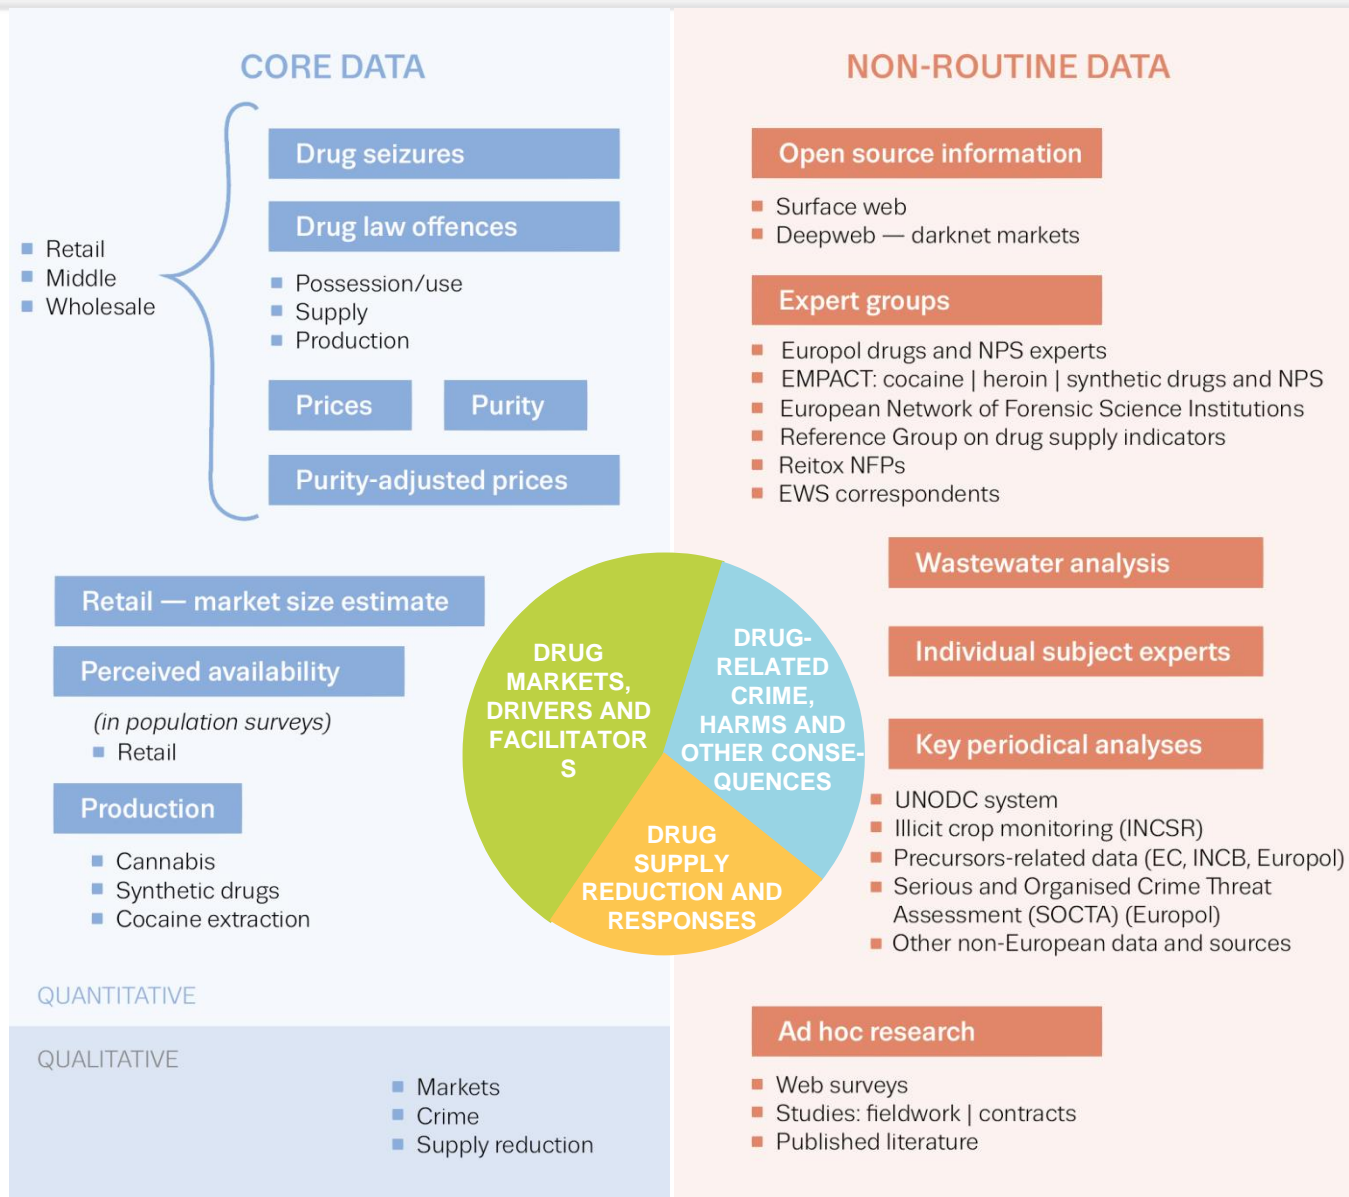

# Building on previous work

## 3 conceptual domains

- **Drug markets, drivers and facilitators**
  - Processes & actors
  - Market dimensions
  - Drivers
- **Drug-related crime, harms & other consequences**
  - Social and economic consequences
  - Environmental impacts
- **Drug supply reduction and responses**

# Supply-side monitoring system: EMCDDA framework

# Approaches for improvement

- Improve existing data collections
- Expand the range and scope of the data collected
- Improve analysis

# Improving existing data

# Routine data (+15 years of monitoring)

Drug law offences

Seizures

Prices

Composition of tablets

Potency/Purity

# Areas for improvement

- Developmental tasks
  - Expanded scope of reporting
  - Reporting by market level
  - Information on trafficking routes
- Focus on implementation and consolidation
- Improve availability & comparability
- Dividend in terms of analytical capability realised
- Streamline & coordinate with other agencies

# Expanding the range and scope of data collected

# Adding new sources

- Mechanisms to incorporate information on ad-hoc basis
- Assess if essential data becomes suitable for routine reporting

Darknet monitoring

**30 countries**

**2000-2015**

# Drug-related homicide

## Psychopharmacological violence

- Primary/direct
- Intoxicated

## Economic-compulsive violence

- Secondary/indirect
- Support costly drug use

## Systemic violence

- Tertiary
- Intrinsic to involvement in drug market

## Drug involvement in national homicides

### Some figures

2000-2015: Steady 10% of **offenders** is drug user

2000-2015: Annual count of intoxicated **offenders**  $\leq 3$

2013-2015: 6% of **homicides** to obtain drugs or drug proceeds

2003-2006: Intoxicated male and female **offenders**: resp. 22% and 19%

2000-2015: Intoxicated **offenders** fluctuant: 40% (2006), 8% (2015)

2000-2015: Avg. homicide **suspects** under influence of drugs: 18%

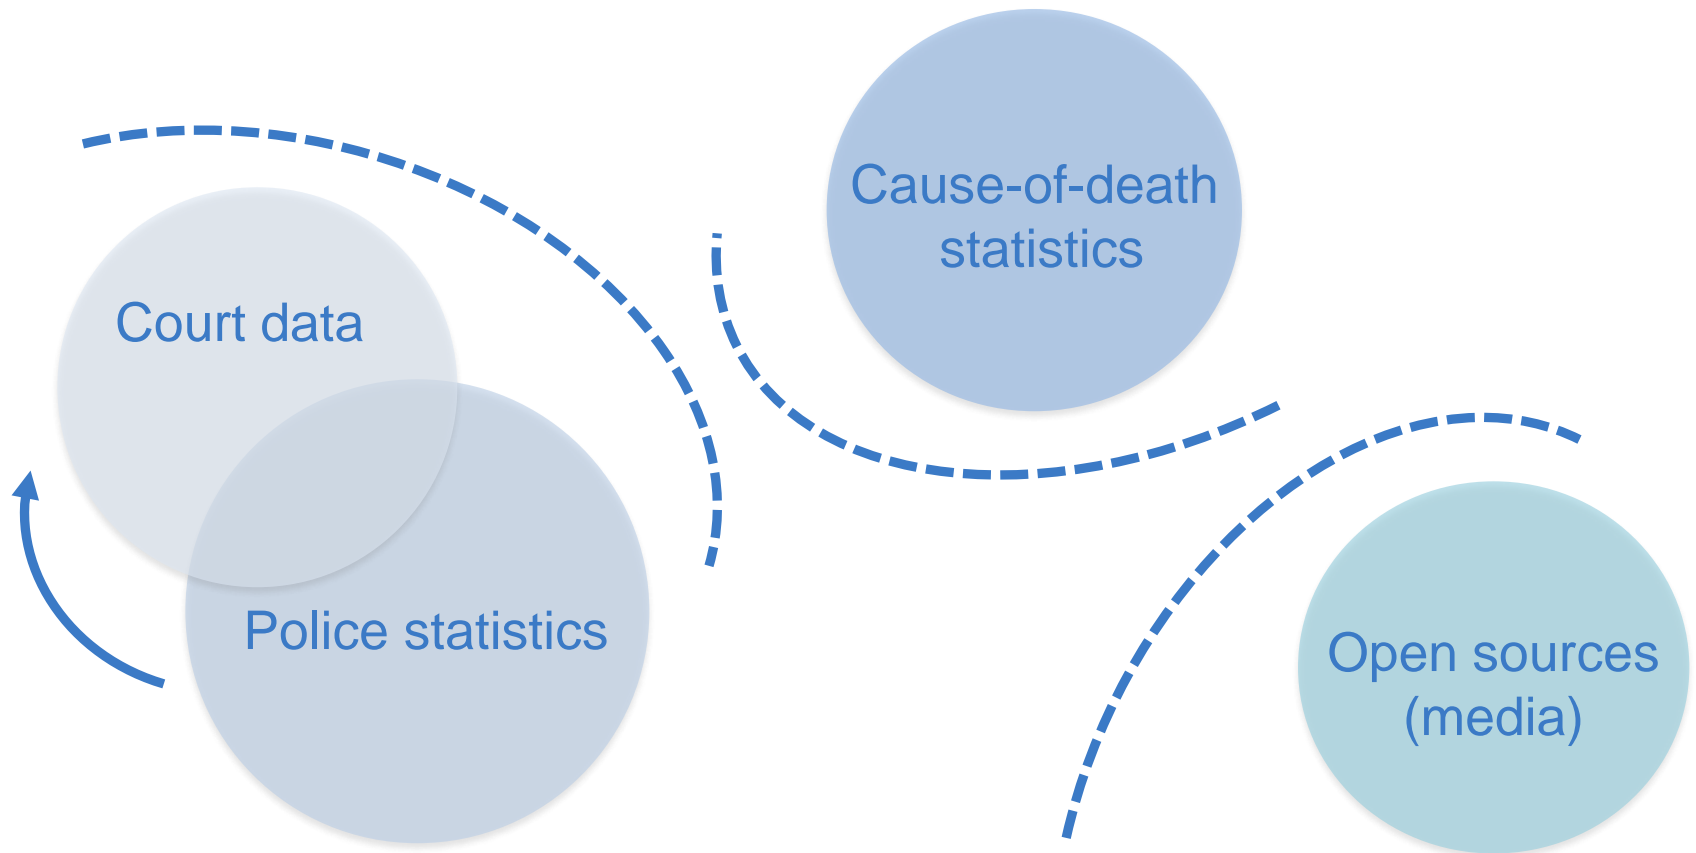

1998-2004: In 8% **dealer** killed user or vice versa

2003-2006: Intoxicated male and female **offenders**: resp. 21% and 13%

# Obstacles

## 1: Fragmentation

# Obstacles

## 2: Cross-national comparability

**‘Drug-related homicide’**

### **Definition**

Differential use of definition  
‘homicide’

# Obstacles

## 3: Cross-national comparability

### ‘Drug-related homicide’

#### Unit of analysis

Event <> Offender <> Victim

#### Specific output

E.g.  drug user <> drug intoxication 

E.g.  dealer kills dealer <> user kills dealer 

#### Definition

Differential use of definition  
‘homicide’

# Overcoming obstacles

to monitor drug-related homicide on the European level...

**Build a consortium of data providers to implement a platform for the collection and analysis of data on drug-related homicide in Europe**

- EMCDDA – EHM
- Uniform definitions and coding

# Open source information

# OSINT

## Open Source **INT**elligence

‘Is an information processing discipline that involves finding, selecting, and acquiring information from publicly available sources and analyzing it to produce actionable intelligence.’

# What did we do?

- EC-JRC collaboration
- EMM tool pilot
- March – Sept 2017
- Thematic scope: heroin & cocaine large seizures
- Key terms & sources
- LE and media websites
- Strategic insights

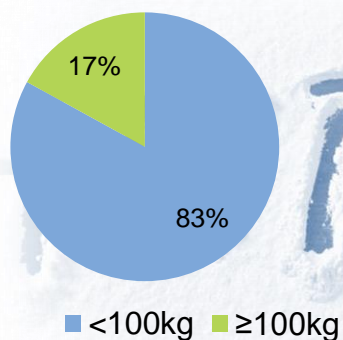

NEWS DESK  
RAPID NEWS SERVICE

# OSI heroin and cocaine seizures

~ 6 m (end March – mid Sept 2017)

n=29

Total weight: 3.3 tons  
Big seizures total weight: 2.8 tons

n=67

Total weight: 38.7 tons  
Big seizures total weight: 38.2 tons

# M.O. heroin seizures

~ 6 months

■ AIR ■ LAND ■ SEA

■ ON PRIVATE PREMISES/DWELLING  
■ VEHICLE (PRIVATE/PUBLIC)  
■ AIRCRAFT  
■ BOAT

**Concealment: predominantly in private storage 44%**

# Heroin seizures

## Origin

## Destination

■ YES

# Heroin seizures

## Origin

## Transit

■ YES  
■ NK

## Destination

# M.O. cocaine seizures

~ 6 months

**Concealment: predominantly containers/among goods 45%**

# Cocaine seizures: origin, transit and destination

## Origin

## Destination

■ YES  
■ NK

# Cocaine seizures: origin, transit and destination

## Origin

## Transit

## Destination

■ YES  
■ NK

Brazil, Colombia, Ecuador,  
Guatemala, Panama and Spain

# Potential advantages

## Contextual information

- Method of concealment
- Trafficking m.o.
- Type of drug trafficker

## Improved timeliness

- Emerging drug dealing locations
- New selling/trafficking methods

## Improved flexibility

- Highlight fluctuations
- Identify detail in broader pattern

# Limitations

- Information overload
- False positive results
- Likely biased towards bigger seizures
- Does not address a fundamental challenge with seizures data related to police priorities setting

...potential as an additional source

# Improve analysis

# Improving analysis

- Developing new tools and analytical approaches
- Triangulation and cross-indicator analysis
- Making use of contextual and other data
- Documenting limitations and caveats

# Some current discussions

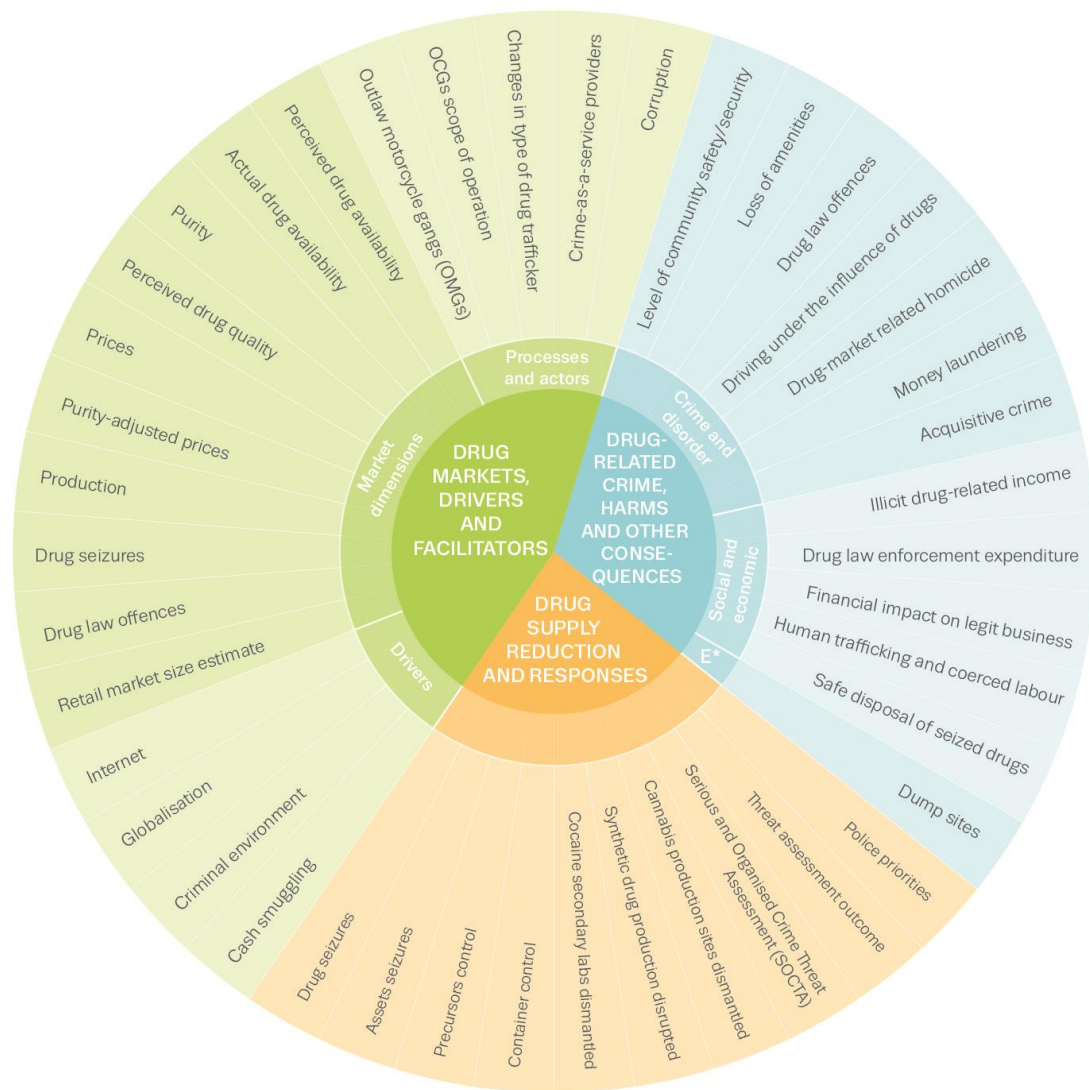

## Data sources for new areas in crime domain – establishing a drug link

- Links to other crime areas
- Enablers: corruption, financial impact

## Need to prioritise

# Thematic areas, domains & potential indicators

E\* = environmental

# ...and dilemmas

How to harvest data en masse with less burden

What new data processing and analytical tools?

# Concluding reflections

- Different data sources provide different pieces of the jigsaw which is the picture of drug supply
- Data gaps and inconsistencies may be inevitable and often fluctuating
- All data sources have limitations so triangulation and cross-indicator analysis is essential
- It is increasingly important to consider overlaps between drugs and other crime areas
- It is critical that next steps are supported by expert networks –further data quality improvement & access to research, intelligence and contextual information to inform future analysis

European Monitoring Centre  
for Drugs and Drug Addiction

# Drug affordability — a potential tool for comparing illicit drug markets

## Retail price & purity, 2015

### Adjustment for purity

$$PAP_c = \text{primary price}_c \times 100 / \text{reported purity}_c$$

### Adjustment for economy

$$\text{Affordability}_c = PAP_c \times \text{PLI EU} / \text{PLI}_c$$

$$PLI_c = PPP_c / XR_c$$

# Retail heroin primary (unadjusted) price (2015; €/g)

# Retail heroin price adjusted for purity (2015; €/g)

# Retail heroin affordability (purity and PLI adjusted price) (2015; €/g)
