Recent changes and new trends in the drugs market

During the year 2016, as part of the **Plan Cuscatlán**, the inter-agency unit formed by aerial and naval armed forces personnel, took on actions against drug traffic and related crimes.

The purity of retail level (on the Street) cocaine hydrochloride has a purity of 64,97% to 85,54% and **adulterants like levamisol** have been found in its chemical composition.

Cocaine base has a purity between 50,65% and 81,30%, containing solvents like **sodium bicarbonate** and adulterants like **levamisol** and **lidocaine**.

Recent changes and new trends in the drugs market

Naval Forces have carried out operations of interdiction of speedboats, drug seizures.

The modus operandi detected is that drugs are tossed with buoys in deep sea and is later located through GPS by drug traffickers.

The country of origin of the drugs trafficked by sea are Colombia and Ecuador.

1,681 kilos of cocaine seized in a submersible boat sailing at 231 miles south of Punta Remedios, Acajutla Sonsonate. The drugs are valued at 42 million dollars.

Drug-related social and health consequences

Police reports inform of an increase in gang (maras) members in the **sale and distribution** of drugs in the country, associated with an increase in drug traffick and homicides provoked by turf wars for control of sale and distribution in local market.

It is estimated that 60% of people arrested are common people and that 40% are gang (maras) members.

90% of those arrested for illicit traffic and possession of drugs were male.

43% of those arrested were young people between 10 and 19 years of age.

From the total of detainees (4,855), in 2016, 98% were Salvadoran.

89% (4,320 people) of detainees were unemployed.

53% of detainees were for possession of marijuana, 42% for illicit traffic of marijuana, and 5% for possession and illicit traffic of cocaine, crack and methamphetamine.

Drug-related social and health consequences

From a total of 184 cases, **26 cases were associated with PS use disorders**, with a majority of **males**.

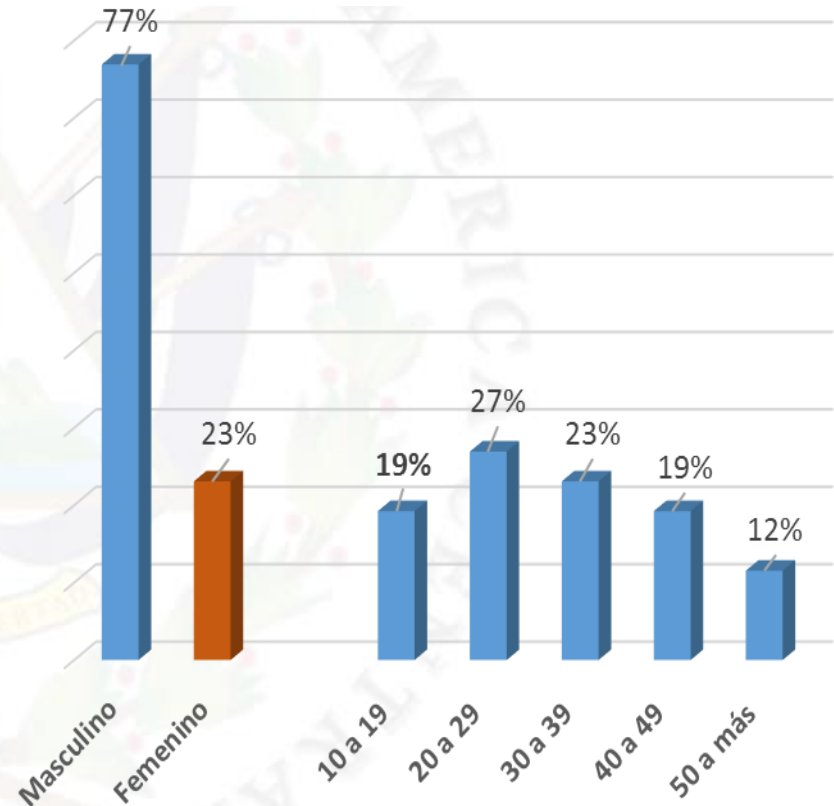

In the range from **10 to 19 years of age**, is where the **highest risk** of consummating suicide has been found, given that previous attempts for 80% of these have been registered.

The **main mechanism for suicide attempt** used by these patients has been **intoxication with different PS** by 46% (12 cases).

Among factors associated with PS, in the adolescent group, we can highlight **depressive symptoms, loss of emotional ties, aggravated for being victims of violence and sexual abuse**.

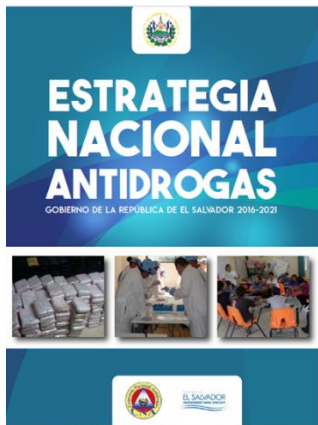

One death by use of multiple drugs and PS
415 deaths by alcohol use. Mostly male.

Cases of suicide attempt associated to PS use disorders
